

Clean water from roof and clean surfaces to open and store filled infiltration trenches and a piped system each side of the building. This is then discharge into a soakaway. At the wash down stage clean water systems around the yard will be switched to the underground dirty water tank. Shown blue on the plan.

All dirty water from wash down will be collected in an underground sealed tank. This will be then tankered out as necessary and applied to the land in accordance with the Manure Management Plan. Shown red on the plan.

The clean water and foul water systems will be kept seperate, to ensure no pollution incident occurs to the environment.

The underground storage tank for dirty water will be constructed to meet the SSAFO Regulations (Wales) 2010 standards.
