

Key

-  - New tree planting of native species
-  - New hedgerow planting of native species
-  - Existing hedgerow to be retained

Notes

The birds within the free range unit will graze the in rotation. The birds will step out of the building through 'popholes' onto a stone hardcore veranda, ensuring the land is not poached and compacted.

Good pasture management is essential in the organic poultry unit.

All hedgerows in the range area will be double fenced with chicken proof stock fencing.

The range area for the birds is 3Ha.

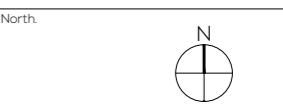

The land is freely draining acid loamy soils over rock.

Grass land covering and farm track

osddu

Site Area 3000 m²

Dwg Notes:
 Do not scale, use figured dims only. Dims displayed in millimeters unless stated otherwise. All dimensions to check on site prior to commencement, any discrepancies to be report to designer.
